SUMMARY

AI and Data Science student with hands-on experience building distributed systems, machine learning pipelines, and full-stack mobile applications. Proficient in Python, C++, and Java with strong foundations in data structures, algorithms, and software design. Practical exposure to concurrency, multi-threading, synchronization, data mining, and performance optimization across multiple deployed projects in artificial intelligence, deep learning, computer vision, and real-time systems.

EDUCATION

B.Tech – Artificial Intelligence & Data Science | 2024 – Present

Aditya College of Engineering, Madanapalli, Andhra Pradesh

Relevant Coursework: Data Structures & Algorithms • Object-Oriented Programming • Database Management Systems • Machine Learning • Artificial Intelligence • Computer Networks • Software Engineering • Operating Systems

SKILLS

Programming Languages: Python, C++, Java, SQL, JavaScript

CS Fundamentals: Data Structures • Algorithms • Software Design • OOP • Distributed Systems • Concurrency • Multi-threading • Synchronization

AI & Machine Learning: Machine Learning • Deep Learning • Computer Vision • NLP • Data Mining • Artificial Intelligence • RAG • LangChain

Frameworks & Tools: React Native • Node.js • Git • GitHub • REST APIs • Cloud Computing

Systems & Engineering: System Architecture • Performance Optimization • Debugging • Reliability • Data Visualization • Database Design

TECHNICAL EXPERIENCE

Smart Farm – Crop Prediction & Agriculture Platform

Python • Machine Learning • React • farm-beta-topaz.vercel.app

- Designed the system architecture for a distributed agriculture web application with three integrated modules: crop prediction, live mandi price tracking, and pesticide/medicine recommendation — all served from a unified backend.
- Applied data mining techniques on agricultural datasets and evaluated multiple machine learning classification algorithms; achieved 90% accuracy with interactive data visualization dashboards for real-time market price monitoring.

Medical Image Disease Detection System

Python • Deep Learning • Computer Vision

- Architected an end-to-end deep learning pipeline for automated disease detection from medical images — covering multi-stage preprocessing, augmentation, model training, inference, and performance benchmarking — achieving 93% test accuracy.
- Conducted systematic debugging and performance analysis across the training loop; implemented early stopping and learning-rate scheduling to improve model reliability and reduce overfitting on held-out data.

Smart Academy – Mobile Learning Platform

React Native • Node.js • AI • smart-academy.vercel.app

- Architected a distributed client-server mobile platform with React Native and Node.js, implementing synchronization mechanisms to maintain consistent state across concurrent user sessions.
- Integrated machine learning algorithms for personalized content delivery; applied software design principles to separate AI inference from the presentation layer, improving maintainability and response performance.

WorkLink – Job Portal for Workers

Full-Stack • Mobile Development • nithish1105.github.io/worklink

- Built a full-stack distributed mobile platform connecting daily-wage workers with employers, implementing concurrency handling and thread-safe real-time messaging to support multiple simultaneous user sessions reliably.
- Designed a normalized database schema for user profiles and job listings; developed a job-matching algorithm using data-structure-driven filtering and conducted performance debugging to optimize response time on low-end devices.

CERTIFICATIONS

- View all certificates:** drive.google.com/certificates
- Data Science • Computer Vision • Machine Learning • Natural Language Processing
- Principles of Generative AI Certification • Prompt Engineering
- Retrieval Augmented Generation (RAG) with LangChain • Introduction to Intellectual Property Rights

ACHIEVEMENTS

1st Prize – HackSprint, Fusion 2K26 | 2026

First place at Aditya College's annual tech fest — built a working solution under time constraints, judged on technical depth and live demo.
